The neuroscience curriculum at the University of North Carolina at Chapel Hill is a broadly based interdisciplinary graduate training program in the neurosciences. With strong research funding and a long and successful training history, the curriculum ranks among the best programs in the country.

The program has 80 primary faculty members who can serve as dissertation advisors. Research opportunities in the curriculum are supported by the presence of an active neuroscience community at UNC–Chapel Hill. This community includes members of every basic science department in the School of Medicine, members of many clinical departments, as well as several departments in the College of Arts and Sciences. University research and clinical centers with a neuroscience component also contribute to the vibrant and active community that makes neurobiology a major intellectual focus at UNC–Chapel Hill.

The neuroscience curriculum enrolls an average of 45 students at different levels of training at any given time; typically, five to ten students are accepted each year depending on available funding. Students in the curriculum are supported during their first and/or second years by a long-standing training grant funded through NINDS, and in subsequent years by either their mentor’s research grants or individual fellowships. The average time to graduation is 5.4 years.

Neuroscience is by its very nature an interdisciplinary endeavor, and at UNC–Chapel Hill the neuroscience curriculum provides a broadly structured training curriculum and research environment that spans the range from genetic studies of the nervous system through the complexities of human cognitive function.

Applicants are urged to complete their applications through BBSP (http://bbsp.unc.edu/admissions) by early December.

Courses required for the Ph.D. degree in neuroscience include Molecular and Cellular Neuroscience (NBIO 722A, NBIO 722B, NBIO 722C) and Systems and Translational Neuroscience (NBIO 723A, NBIO 723B, NBIO 723C).

The purpose of the course in Molecular and Cellular Neuroscience is to explore the experimental and theoretical basis for current concepts of nervous system function. The course runs as a series of three blocks in the fall semester and three blocks in the spring semester. This is NOT a survey course in neuroscience. The goals of the course are not so much to inform as to foster an understanding of how we accumulate our knowledge and hypotheses, not to provide a complete textbook picture of the functioning nervous system as we currently know it but to provide the intellectual tools and skills to evaluate current and future hypotheses, not so much to provide answers to questions as to attempt to define the unanswered questions.

Block 1 – Neuroscience Bootcamp: Introduction to Techniques Used in Studying the Nervous System/Electrical Signaling (NBIO 722A) (19 sessions) Because students taking the core course have diverse backgrounds, this block is divided into two sections.

Block 1a – Neuroscience Bootcamp: Introduction to Techniques Used in Studying the Nervous System (9 sessions). The first block serves as an introduction to neuroscience as well as an overview of many of the techniques students will encounter while reading materials and papers for the rest of the course. Examples of topics covered include statistics and hypothesis testing, molecular biology and genetic engineering, confocal microscopy, and functional anatomy of the rodent brain. Fall. Jensen, Brenman, Robinson, Besheer, Stuber.

Block 1b – Electrical Signaling (10 sessions). This block introduces materials related to electrical excitability of neurons. Topics include ion channels, membrane potentials, generation and propagation of action potentials, dendritic excitability, and computational neuroscience as it relates to electrical signaling of neurons. Fall. Smith, Frohlich, Manis.

Block 2 – Synaptic Mechanisms (NBIO 722B) (10 sessions). This block focuses on synaptic mechanisms of neurotransmitter release and termination of signaling, as well as intracellular signaling cascades that are regulated by synaptic transmission. Topics include electrophysiological and molecular analysis of neurotransmitter release, short-term plasticity in neurotransmitter release, synaptic plasticity, calcium signaling and regulation of intracellular signaling cascades, and gene expression. Fall. Philpot, Reissner, McElligott, Dudek.

Block 3 – Receptors (NBIO 722C) (10 sessions). This block focuses on neurotransmitter signaling through distinct receptor subclasses. Topics include G-protein coupled receptors and associated signaling, receptor binding theory, ionotropic and metabotropic glutamate and GABA receptors, receptor trafficking and localization. Fall. Kash, Harden, Nicholas, Weiss, McElligott, Herman.

Block 4 – Development of the Nervous System (NBIO 723A) (11 sessions). This block focuses on molecular mechanisms of neuronal development and their relation to disease. Topics include neurogenesis, neural stem cells, molecular control of axonal guidance and neuronal migration, and cell and synaptic adhesions molecules. Spring. Crews, Maness, Anton, Deshmukh, Gupton, Song, Stein.

Block 5 – Anatomy and Function of Sensory and Motor Systems (NBIO 723B) (17 sessions). This block focuses on the neural circuitry that comprises sensory and motor systems. Topics include organization and function of the retina and visual cortex, mechanosensation, genetically defined circuits for nociception, organization and function of somatosensory cortex, motor cortex, basal ganglia neural circuitry, and cerebellar organization and function. Spring. Zylka, Manis, Fitzpatrick, Stuber, Snider, Weiss, Cheney.

Block 6 – Neurobiology of Disease (NBIO 723C) (12 sessions). This block focuses on the neurobiological underpinnings of disease. For each topic the disease and its impact on society is introduced, and then detailed discussions of the molecular, genetic underpinnings and circuit and behavioral consequences of the disorder are presented. Topics include epilepsy, addiction, fear and anxiety circuitry, schizophrenia, autism, Alzheimer’s disease, and Parkinson’s disease. This block also includes two classes devoted to human neuroimaging methods such as fMRI and DTI. Spring. Snider, Gilmore, Cohen, Ditcher, Stein, Stuber, Zylka, Piven.

1 denotes the head of the block

Communication of Scientific Results Neurobiology (NBIO 850)
The class teaches the principles for giving effective talks. The course also covers how to introduce speakers, prepare slides, and speak with the public about science. Spencer Smith currently directs the course, with additional faculty members participating in each class. The class is limited to Neuroscience Curriculum students. Students prepare talks, refine them in small groups (three to four students), and then present them in class. The in-class talk is videotaped, and these tapes are reviewed by the students in a session with their peers. After another round of refining their talks with their small group, the students give their polished talks to the department in a formal setting. Writing is critiqued in class, with peers and guest faculty members all offering input. The videotaped reviews and peer critiques help tremendously to teach effective speaking and writing methods in NBIO 850 (a.k.a. PClass); thus, preparing students for the next stage in their scientific careers. Fall. S. Smith.

**Introductory Statistics for Laboratory Scientists (BBSP 610)**

BBSP 610 introduces the basic concepts and methods of statistics, with emphasis on applications in the experimental biological sciences. Emphasis is on mastery of basic statistical skills and familiarity with situations in which advanced analytical skills may be needed. Course objectives include learning to use statistical reasoning to formulate scientific questions in quantitative terms, learning to design and interpret graphical and tabular displays of statistical information, using basic probability models to describe trends and random variation in laboratory data, and using basic statistical models, including tests and confidence intervals to draw inferences from data. Topics include experimental design, basic summary statistics, graphical methods for visualizing data, probability, confidence intervals, hypothesis testing, and regression. The course introduces and employs the freely available statistical software, R, to explore and analyze data. Fall, five weeks, Bair.

**Neuroscience Seminar Series (NBIO 893)**

Diverse but current topics in all aspects of neuroscience. Relates new techniques and current research of notables in the field of neuroscience. Content focuses on presentations by invited, non-UNC faculty, UNC faculty, and mini-series presentations from current neuroscience students. Topics vary from week to week. Students in the curriculum are expected to attend and participate in the neuroscience seminar series, and in particular year 2 and 3 students will be enrolled in NBIO 893 each semester, for which their attendance and participation in seminars and dissertation defenses is tracked and graded. Fall and spring, Stuber.

On the curriculum's Web site, the courses menu lists descriptions of the core courses of the neuroscience curriculum; other selected offerings are shown under the electives menu. Additional elective courses in biochemistry, statistics, molecular biology, physiology, etc., are available to compensate for specific deficiencies or enhance training. It is the current philosophy of the curriculum faculty that students should receive a broad exposure to as many aspects of neuroscience as reasonable, from molecules and genetics through systems, behavior, and human diseases of the nervous system.

The following is a partial list of courses that neuroscience students may consider for their elective requirements.

**Microscopy (NBIO 731)**
**Special Topics in Neuroscience: The Methods in Genetic Engineering (NBIO 890-002)**
**Special Topics in Neuroscience: Network Neuroscience (NBIO 890-003)**
**Developmental Neuroscience (NBIO 724)**
**Neural Information Processing (NBIO 729)**
**Gene Brain Behavior Interactions in Neurodevelopmental Disorders: Towards an Integration of Perspectives on Disease Mechanisms (NBIO 800)**
**Clinical Syndromes and Neurodevelopmental Disorders (NBIO 801)**
**Neurocircuits and Behavior Journal Club (NBIO 733)**
**Neuroanalytics (NBIO 750)**
**Biological Bases of Behavior I (PSYC 701)**
**Biological Bases of Behavior II (PSYC 702)**
**Translational Seminar in Cognitive and Clinical Neuroscience (NBIO 727)**
**Neuropsycharmacology of Alcohol and Substance Abuse (PHCO 728)**
**Principles of Statistics Infer (BIOS 600)**
**Research Ethics (GRAD 721)**
**Seminar in the Biological Foundations of Psychology (PSYC 708)**
**Statistical Methods in Psychology (PSYC 830)**

NBIO

Advanced Undergraduate and Graduate-level Courses

NBIO 400. Conditioning and Learning. 3 Credits.
A comprehensive survey of the methods, findings, and theories of classical and operant conditioning. Skills necessary to evaluate, integrate, and summarize significant original literature will be developed.
Requisites: Prerequisites, PSYC 101 and 222.
Gen Ed: PL.
Grading status: Letter grade
Same as: PSYC 400.

NBIO 401. Animal Behavior. 3 Credits.
PSYC 270 recommended. Ethological, genetic, and physiological variables will be studied in relation to their behavioral effects.
Requisites: Prerequisites, PSYC 101, and PSYC 222 or BIOL 101.
Gen Ed: PL.
Grading status: Letter grade
Same as: PSYC 401.

NBIO 402. Advanced Biopsychology. 3 Credits.
Elements of neurophysiology, neuroanatomy, and neurochemistry as they apply to the understanding of brain-behavior relationships.
Requisites: Prerequisites, PSYC 101 and 220.
Gen Ed: PX.
Grading status: Letter grade
Same as: PSYC 402.

NBIO 411. Neurobiology Laboratory Apprenticeship. 1-21 Credits.

NBIO 412. Neurobiology Laboratory Apprenticeship. 1-21 Credits.

NBIO 450. Tutorial in Neurobiology. 3 Credits.

Graduate-level Courses

NBIO 701A. Brain & Behavior I. 3 Credits.
Graduate standing required. A survey of psychological and biological approaches to the study of sensory and perceptual information processing, with an emphasis on touch and pain.
Same as: PSYC 701.

NBIO 702A. Brain & Behavior II. 3 Credits.
A survey of psychological and biological approaches to the study of basic learning and higher integrative processing.
Same as: PSYC 702.
NBIO 703. Advanced Biological Psychology: Central Nervous System. 3 Credits.
Each fall one special topic will be covered in depth (e.g., neural bases of memory storage, homeostasis, and perception). Format includes lectures and seminar meetings with student presentations.
Requisites: Prerequisite, PSYC 402.
Same as: PSYC 703.

NBIO 704. Applications of Experimental Psychology to Health Research. 3 Credits.
This course provides a critical analysis of interdisciplinary research within experimental psychology, including such topics as psychopharmacology, psychoneuroimmunology, psychophysiology, and animal models of brain/behavior disorders.
Same as: PSYC 704.

NBIO 705. Behavioral Pharmacology. 3 Credits.
Basic principles of pharmacology and behavior analysis are considered in relation to drugs that affect the central nervous system.
Requisites: Prerequisite, PSYC 404; permission of the instructor for students lacking the prerequisite.
Same as: PSYC 705, PHCO 705.

NBIO 708. Seminar in the Biological Foundations of Psychology. 3 Credits.
Permission of the instructor. Limited to graduate students in psychology and neurobiology. Lectures and seminar presentations on a wide range of topics in the area of physiological psychology.
Repeat rules: May be repeated for credit.
Same as: PSYC 708.

NBIO 721. Directed Studies in Oral Biology. 1 Credit.
Topics include extracellular matrices, immunology, inflammation, neurobiology, and pain management.
Same as: OBIO 721.

NBIO 722. Cellular and Molecular Neurobiology. 2-6 Credits.

NBIO 722A. Cellular and Molecular Neurobiology: Introduction and Electrical Signaling. 2 Credits.
Permission of the department. Introduces topics as brain cell biology, molecular biology applied to neurons, membrane potentials and imaging methods. The second half of this block introduces such topics as resistance, capacitance, passive membranes, classes of ion channels, potassium and calcium channels, and action potential initiation.
Same as: BIOC 722A, PHCO 722A.

NBIO 722B. Cellular and Molecular Neurobiology: Postsynaptic Mechanisms-Receptors. 2 Credits.
Permission of the department. Consideration of membrane receptor molecules activated by neurotransmitters in the nervous system with emphasis on ligand binding behavior and molecular and functional properties of different classes of receptors. Course meets for four weeks with six lecture hours per week.
Same as: BIOC 722B, PHCO 722B.

NBIO 722C. Cellular and Molecular Neurobiology: Synaptic Transmissions. 2 Credits.
Permission of the department. This block focuses on neurotransmitter signaling through distinct receptor subclasses. Topics include G-protein coupled receptors and associated signaling, receptor binding theory, ionotropic and metabotropic glutamate and GABA receptors, receptor trafficking and localization. Course meets for five weeks with six lecture hours per week.
Same as: BIOC 722C, PHCO 722C.

NBIO 723A. Cellular and Molecular Neurobiology: Development of the Nervous System. 2 Credits.
Permission of the department. This block covers neural induction, neural stem cells, glial development, neural cell death and neurotrophin during development, and synaptic adhesion molecules.
Same as: BIOC 723A, PHCO 723A.

NBIO 723B. Cellular and Molecular Neurobiology: Anatomy and Function of Sensory and Motor Systems. 2 Credits.
Permission of the department. This block introduces the sensory pathways of vision, audition, taste, olfaction, pain, and touch, as well as the motor pathways of the spinal cord, basal ganglia, cerebellum, and motor cortex. Discusses mechanisms of sensory information processing and motor execution. Includes peripheral and central mechanisms of pain.
Same as: BIOC 723B, PHCO 723B.

NBIO 723C. Cellular and Molecular Neurobiology: Imaging & Disease. 2 Credits.
This block covers CNS imaging, regeneration, and such diseases as Alzheimer’s, ALS, Parkinson’s, epilepsy, addiction, autism, and schizophrenia.

NBIO 725. Experimental Neurophysiology. 3 Credits.
Permission of the instructor. Six or more laboratory hours a week.

NBIO 727. Translational Seminar in Cognitive and Clinical Neuroscience. 2 Credits.
Introduces new neuroimaging techniques and their application to the study of neural correlates of cognitive and behavioral impairments in brain disorders. Reviews the theories and research methodologies that investigate how brain functions support and give rise to mental operations such as attention, memory, emotions, social cognition in the healthy brain.
Repeat rules: May be repeated for credit.

NBIO 728. Diseases of the Nervous System. 2 Credits.
Explores the basic neurobiology and the clinical aspects of a range of diseases of the nervous system, including ALS, Alzheimer’s, autism, schizophrenia, multiple sclerosis, deafness, epilepsy, pain, brain tumors, stroke, Parkinson’s, and other neurodegenerative diseases.
Requisites: Prerequisites, NBIO 201, or 222 and 223.

NBIO 729. Sensory Neural Information Processing and Representation. 3 Credits.
Additional required preparation, one year of calculus, familiarity with MATLAB or Python, or permission of the instructor. A discussion/reading seminar covering the fundamentals of nervous system information processing and integration, with examples from sensory systems.
Requisites: Prerequisites, NBIO 722 and 733.

NBIO 731. Microscopy: Principles & Applications. 2 Credits.
This course aims to provide the knowledge one may need to understand the reach of microscopy imaging techniques, to be able to choose the right imaging modality, label the sample, carry out the experiment, analyze data, troubleshoot any pitfalls that may occur, and put together a custom optical setup.

NBIO 732. Biological Concepts. 1.5 Credit.
Overview of structures and biological determinants of conditions and diseases of the oral cavity. Both growth and development and pathophysiology will be introduced in the context of three areas of oral biology: biology of extracellular matrices, host-pathogens interactions, and orofacial neurobiology.
Same as: OBIO 732, PHCO 747.
NBIO 733. Neurocircuits and Behavior Journal Club. 1 Credit.
This is a journal club course that will meet once per week for 90 minutes to discuss new research papers focused on delineating how neurocircuits function to orchestrate various behavioral states. Papers for discussion will be chosen by the instructor and students, and students will rotate in leading discussions.
Requisites: Prerequisites, NBIO 722 and 723.

NBIO 735. Seminar in Chemical Neurobiology. 2 Credits.
Required preparation, two semesters of biochemistry.

NBIO 750. Neuroanalytics: Programming, Statistics, and Machine Learning for the Analysis of Neuroscience Data. 4 Credits.
Practical/theoretical training in advanced data analysis approaches commonly used in neuroscience research. Course useful with modern data collected in Neuroscience, from sequencing, electrophysiology, imaging, biochemistry, and behavior. The concepts will be taught through programming in python, focusing on illustrating concepts by emphasizing graphical representations of how datasets.
Requisites: Prerequisites, NBIO 722 and 723.

NBIO 800. Gene-Brain-Behavior Interactions in Neurodevelopmental Disorders: Perspectives on Disease Mechanisms. 3 Credits.
This seminar examines the topics of genetics, neuroanatomy, physiology, and behavioral development to provide a broad-based and integrated background to understand the etiology and potential mechanism underlying neurodevelopmental disorders.

NBIO 801. Clinical Syndromes and Neurodevelopmental Disorders. 3 Credits.
This seminar will review the epidemiology, pathogenesis, diagnosis and treatment of neurodevelopmental syndromes and disorders. Topics will range from single gene (e.g., fragile X syndrome and tuberous sclerosis) to complex genetic (e.g., autism, schizophrenia), to environmental disorders with varied phenotypes, pathogenetic mechanisms, and treatments.

NBIO 850. Seminar in Neurobiology. 3 Credits.
Permission of the department. An intensive consideration of selected topics and problems in neurobiology. The course focuses on the development of presentation and evaluation skills of the trainees. Six credit hours required for neurobiology graduates.
Same as: BIOL 850, PHCO 850.

NBIO 857. Seminar in Comparative Animal Behavior. 1-2 Credits.
Permission of the instructor. Advanced seminar in comparative animal behavior. May be repeated for credit.
Repeat rules: May be repeated for credit; may be repeated in the same term for different topics.
Same as: BIOL 857.

NBIO 858. Seminar in Comparative Physiology. 1-2 Credits.
Advanced seminar in comparative physiology.
Requisites: Prerequisite, BIOL 451; permission of the instructor for students lacking the prerequisite.
Repeat rules: May be repeated for credit; may be repeated in the same term for different topics.
Same as: BIOL 858.

NBIO 890. Special Topics in Neurobiology. 1-5 Credits.
Special topics in neurobiology. Content will vary from semester to semester.

NBIO 892. Special Topics in Physiology. 1-5 Credits.
Permission of the instructor. Individually arranged in-depth programs of selected topics such as membrane function, transport physiology, renal physiology, etc.
