Christian Iliadis, Chair

The Department of Physics and Astronomy offers graduate work leading to the degrees of master of science and doctor of philosophy.

The active fields of research are biophysics, medical physics, condensed-matter physics, materials physics, nanotechnology, nuclear physics, neutrino physics and nuclear astrophysics, quantum field theory, theoretical particle physics, general relativity and gravitation, extragalactic and stellar astronomy, and astrophysics. Students can also work in the UNC–Chapel Hill biophysics program, or they can study under any advisor so long as the research project is supervised by a committee that contains a majority of UNC–Chapel Hill Department of Physics and Astronomy faculty members. The graduate courses are designed to give students a broad foundation and to introduce them to the special fields in which the research interests of the department lie.

The general regulations of The Graduate School govern the work for the degrees of master of science and doctor of philosophy. To begin a graduate program in physics or astrophysics, the student should have completed most of the requirements for the degree of bachelor of science. To begin a graduate program in physics or astrophysics, the student should have completed most of the requirements for the degree of bachelor of science with a major in physics at the University, or their equivalent elsewhere. The minimum prerequisite for graduate study consists of the basic undergraduate courses:

<table>

Total Hours 38

H Honors version available. An honors course fulfills the same requirements as the nonhonors version of that course. Enrollment and GPA restrictions may apply.

Research Interests

Astronomy and Astrophysics
Research includes the formation, structure, and evolution of stars, our Milky Way galaxy, evolution and dynamics of galaxies, gamma ray bursters, cosmology, numerical relativity and sources of gravitational radiation, stellar seismology and quasars, exo-planets, and interstellar medium physics. UNC–Chapel Hill has guaranteed observing time on the 4.1-meter SOAR Telescope in Chile and on the 11-meter SALT Telescope in South Africa. UNC–Chapel Hill operates a number of smaller robotic telescopes as well and maintains multiple astronomical instrumentation laboratories dedicated to adaptive optics and state-of-the-art spectroscopy.

Biological and Medical Physics
Experimental studies include manipulation and force measurement techniques with applications to DNA, molecular motors, cells, and cilia, and hydration effects in adsorption of biochemicals. There is also a strong focus on the theoretical and experimental transnational research in medical imaging technologies, including radiotherapy instruments based on carbon nanotube X-ray emitters such as single-cell irradiation and in vivo micro-CT; optical coherence tomography with nanoparticle molecular imaging agents; and systems-level implementation of tomographic imaging instruments.

Condensed-Matter Physics
Experimental and theoretical studies of nanomaterials. Atomic scale studies of devices and nanoelectromechanical systems, including quantum computation and transport, actuating nanomotors and sensors, amorphous materials, semiconductors, superconductors, the optical properties of solids, charge transport in solids and fluids, epitaxial growth, magnetic materials and heterostructures.

Field Theory, Particle Physics, Cosmology, Gravitation and Relativity
Research includes gauge field theories, quantum chromodynamics, electroweak theory, grand unified theories, string theory, supersymmetry, supergravity, quantum gravity, theoretical cosmology, numerical relativity, gravitational radiation, and relativistic astrophysics.

Materials Science and Materials Physics
Experimental and theoretical research in the design, synthesis, integration, and characterization of novel solid state materials, including nanostructured materials such as quantum dots, carbon nanotubes and nanorods, quasi-crystals, and metallic glass. Applications of novel materials for solar energy, electron field emission, probes and sensors, and data storage. Applications include flat-panel displays, an X-ray system for biomedical imaging, and rechargeable batteries.

Nuclear Physics
Experimental and theoretical work includes neutrino oscillations and neutrino mass measurements, fundamental symmetries and weak interactions in supernovae. The structure and evolution of stars are investigated using nuclear probes. The origin of the elements in the universe is studied using local accelerator facilities. The nature of the nuclear force and properties of few-body systems. Polarized beams of light ions and gamma-rays and polarized 3He target. Applied nuclear physics.
Facilities and Equipment

Research in physics and astronomy is carried out in laboratories on and off the Chapel Hill campus. Within Phillips Hall and Chapman Hall there are several major research laboratories including the ".nanomanipulator" (a combination of a scanning electron microscope, an atomic force microscope, and sophisticated visualization graphics); the Keck Laboratory for Atomic Imaging and Manipulation, which includes two transmission electron microscopes; and the Goodman Laboratory for Astronomical Instrumentation. Other facilities include apparatus for nuclear magnetic resonance studies, scanning probe microscopes, and Raman and optical spectrometers. For synthesis and fabrication, major facilities include molecular beam epitaxy, microwave plasma-enhanced chemical vapor deposition, laser ablation, and photolithography and reactive ion etching. Resources for highly parallel computing are provided by UNC's Information and Technology Services as well as by national centers.

The department is a partner in the Triangle Universities Nuclear Laboratory and plays a major role in experiments using the Laboratory for Experimental Nuclear Astrophysics (LENA), Tandem Accelerator, and the High-Intensity Gamma-Ray Source at the Free Electron Laser facility. UNC–Chapel Hill has an active program in low-background physics at the KURF underground facility near Blacksburg, VA. UNC–Chapel Hill has a 0.6-meter on-campus telescope and is a major partner in the 4.1-meter SOAR Telescope in Chile and the 11-meter Southern African Large Telescope (SALT) in South Africa. The department operates the PROMPT array of robotic telescopes in Chile and manages the SkyNet array of robotic telescopes. Numerous national laboratories, including Oak Ridge, Brookhaven, NIST, Los Alamos, and Argonne, as well as KamLAND, NRAO, NOAA, the Hubble Space Telescope, and the Chandra X-ray Observatory are also vital parts of our research efforts.

Fellowships and Assistantships

Teaching Assistantships (with stipends of $17,160 for nine months) are available to qualified graduate students. Summer employment is usually available. The duties of assistants include supervising laboratory classes in elementary physics or astronomy, assisting in the supervision of advanced laboratories, teaching recitation sections, and grading papers. Graduate School fellowships are available for well-qualified applicants to support in the summer by teaching or research. Fellowships and Assistantships are also vital parts of our research efforts.

The requirements for a Ph.D. in the Department of Physics and Astronomy are as follows:

a. Successful completion of the following core courses in the department, or completion of their equivalents elsewhere as an undergraduate or graduate student:

<table>

b. Passing the Ph.D. written examination based on core graduate courses in (a) taken by that student

c. Gaining experimental experience either through master's or doctoral research, or (if the student's research is theoretical) by performing an experimental project deemed adequate by the director of graduate studies

d. Passing at least three other advanced graduate-level courses that have been approved by the director of graduate studies

A Ph.D. candidate is also expected to take a preliminary doctoral oral examination within the first three years of graduate study in physics at UNC–Chapel Hill. The oral examination is concerned mainly with the student's dissertation research project. A minor is not required but may be elected, in which case requirement c) above is replaced by the requirement that the student pass at least five graduate-level courses selected from no more than two departments, with no fewer than two courses in either department. The minor program must be approved in advance by the minor department. Teaching experience as part of professional training is required of all doctoral candidates. This experience can be gained through laboratory or lecture instruction as a teaching assistant, either for two semesters or until teaching competence is acquired.

Following the faculty member's name is a section number that students should use when registering for independent studies, reading, research, and thesis and dissertation courses with that particular professor.

Professors

Gerald N. Cecil (47), Experimental Astrophysics
Research Assistant Professor
David B. Hill, Biophysics

Adjunct Professors
Sha X. Chang, Medical Physics
Richard T. Hammond, General Relativity, Gravity, Optics
David Radford, Nuclear Physics
Ryan M. Rohn, Quantum Field Theory, Theoretical Particle Physics
Jie Tang, Materials Physics, Nanomaterials

Adjunct Assistant Professor
Yueh Lee, Medical Physics

Dietrich Schroeer
Stephen M. Shafroth
Lawrence M. Slifkin
William J. Thompson
James W. York Jr.

ASTR
Advanced Undergraduate and Graduate-level Courses

ASTR 501. Astrophysics I (Stellar Astrophysics). 3 Credits.
An introduction to the study of stellar structure and evolution. Topics covered include observational techniques, stellar structure and energy transport, nuclear energy sources, evolution off the main-sequence, and supernovae.
Requisites: Prerequisites, ASTR 202 or ASTR 301, MATH 383, and PHYS 331; permission of the instructor for students lacking the prerequisites.
Grading status: Letter grade.

ASTR 502. Astrophysics II (Modern Research in Astrophysics). 3 Credits.
An introduction to modern research in astrophysics based on scientific journal articles addressing a current topic of interest in galactic or extragalactic astrophysics, including training in computer modeling and statistical analysis, culminating in the completion of a research project.
Requisites: Prerequisites, ASTR 202 or ASTR 301, and MATH 383; pre- or corequisite, PHYS 331.
Gen Ed: EE-Mentored Research.
Grading status: Letter grade.
ASTR 503. Structure and Evolution of Galaxies. 3 Credits.
Overview of the structure and evolution of galaxies, with emphasis on
learning and applying modern research methods such as scientific
literature review and computational astrostatistics. Includes galaxy
morphology and dynamics, star formation, active galactic nuclei, galaxy
interactions, large-scale clustering, environment-dependent physical
processes, and the evolution of the galaxy population over cosmic time.
**Requisites:** Prerequisites, ASTR 202 or ASTR 301, MATH 383, and
PHYS 331.
**Grading status:** Letter grade.

ASTR 504. Cosmology. 3 Credits.
An introduction to modern cosmology; the study of the contents and
evolution of the universe. Covers expanding spacetime, the thermal
history of the early universe, including nucleosynthesis and the cosmic
microwave background, the inflationary model for the origins of cosmic
structure, and the growth of that structure through time.
**Requisites:** Prerequisites, ASTR 202 or ASTR 301, and PHYS 401; pre- or
corequisite, PHYS 321.
**Grading status:** Letter grade.

ASTR 505. Physics of Interstellar Gas. 3 Credits.
Surveys the physical processes governing the interstellar medium (ISM),
which takes up the "refuse" of old stars while providing fuel for young
stars forming. Covers the processes regulating the galactic gas budget
and the corresponding observational diagnostics. Topics: radiative
transfer, line formation mechanisms, continuum radiation, gas dynamics,
star formation.
**Requisites:** Prerequisites, ASTR 202 or ASTR 301, and PHYS 331.
**Grading status:** Letter grade.

ASTR 519. Observational Astronomy. 4 Credits.
a course designed to familiarize the student with observational
techniques in optical and radio astronomy, including application of
photography, spectroscopy, photometry, and radio methods. Three
lecture and three laboratory hours a week.
**Requisites:** Prerequisite, ASTR 102 or 202; pre- or corequisite, PHYS 331;
permission of the instructor for students lacking the prerequisite.
**Grading status:** Letter grade.

**Graduate-level Courses**

ASTR 701. Stellar Interiors, Evolution, and Populations. 3 Credits.
Stellar structure and evolution, including equations of stellar structure,
stellar models, star and planet formation, fusion and nucleosynthesis,
stellar evolution, stellar remnants, and the comparison of theory to
observations.
**Grading status:** Letter grade.

ASTR 702. High Energy Astrophysics. 3 Credits.
White dwarfs and neutron stars: physical properties and observational
manifestations. Extragalactic radio sources, relativistic jets, and
supermassive black holes. Particle acceleration and radiative
processes in hot plasmas. Accretion phenomena. X-ray and gamma-ray
astrophysics.
**Requisites:** Prerequisites, PHYS 711 and 721.
**Grading status:** Letter grade.

ASTR 703. Structure and Evolution of Galaxies. 3 Credits.
Overview of the structure and evolution of galaxies, with emphasis on
learning and applying modern research methods such as scientific
literature review and computational astrostatistics. Includes galaxy
morphology and dynamics, star formation, active galactic nuclei, galaxy
interactions, large-scale clustering, environment-dependent physical
processes, and the evolution of the galaxy population over cosmic time.
**Grading status:** Letter grade.

ASTR 704. Cosmology. 3 Credits.
General relativity and cosmological world models; thermal history of the
early universe, nucleosynthesis, and the cosmic microwave background;
growth of structure through cosmic time.
**Requisites:** Co-requisite, PHYS 701.
**Grading status:** Letter grade.

ASTR 705. Astrophysical Atmospheres. 3 Credits.
Radiative transfer, opacities, spectral line formation, energy transport,
models, chemical abundance determination, interstellar chemistry,
magnetic fields. Applications to observations of planetary, stellar and
solar, galactic (ISM), and intergalactic gaseous atmospheres.
**Requisites:** Prerequisites, PHYS 711 and 721.
**Grading status:** Letter grade.

ASTR 719. Astronomical Data. 4 Credits.
Required preparation, physics-based cosmology course or permission
of the instructor. A course designed to familiarize the student with
observational techniques in optical and radio astronomy, including
application of photography, spectroscopy, photometry, and radio
methods. Three lecture and three laboratory hours a week.
**Grading status:** Letter grade.

ASTR 891. Seminar in Astrophysics. 1-21 Credits.
Recent observational and theoretical developments in stellar, galactic,
and extragalactic astrophysics.
**Grading status:** Letter grade.

**PHYS**

**Advanced Undergraduate and Graduate-level Courses**

PHYS 401. Mechanics I. 3 Credits.
permission of the instructor for students lacking the prerequisites.
Particle kinematics, central forces, planetary motions. Systems of
particles, conservation laws, nonlinearity. Statics, motion of rigid bodies,
Lagrange’s and Hamilton’s equations. Euler’s equations. Vibrations and
waves.
**Requisites:** Pre- or corequisites, MATH 383 and PHYS 331;
**Grading status:** Letter grade.

PHYS 405. Biological Physics. 3 Credits.
How diffusion, entropy, electrostatics, and hydrophobicity generate order
and force in biology. Topics include DNA manipulation, intracellular
transport, cell division, molecular motors, single molecule biophysics
techniques, nerve impulses, neuroscience.
**Requisites:** Prerequisites, PHYS 116 and 117, or PHYS 118 and 119.
**Grading status:** Letter grade
**Same as:** BIOL 431, BMME 435.
PHYS 410. Teaching and Learning Physics. 4 Credits.
Learning how to teach physics using current research-based methods. Includes extensive fieldwork in high school and college environments. Meets part of the licensure requirements for North Carolina public school teaching.
Requisites: Prerequisites, PHYS 116 and 117, or PHYS 118 and 119; permission of the instructor for students lacking the prerequisites.
Gen Ed: EE- Field Work.
Grading status: Letter grade.

PHYS 412. Electromagnetism II. 3 Credits.
Brief treatment of DC and AC circuit theory. Electrostatics: dielectrics; the magnetic field; magnetic materials. Maxwell's equations and their application to electromagnetic waves.
Requisites: Prerequisite, PHYS 311; permission of the instructor for students lacking the prerequisite.
Grading status: Letter grade.

PHYS 415. Optics. 3 Credits.
Requisites: Prerequisites, PHYS 311 and 412; permission of the instructor for students lacking the prerequisites.
Grading status: Letter grade.

PHYS 422. Physics of the Earth's Interior. 3 Credits.
Requisites: Prerequisites, MATH 383, and either PHYS 201 and 211 or 311 and 401.
Grading status: Letter grade
Same as: GEOL 422.

PHYS 424. General Physics I. 4 Credits.
This course is specifically for certification of high school teachers. Students may not receive credit for both PHYS 424 and PHYS 104 or 114.
Grading status: Letter grade.

PHYS 425. General Physics II. 4 Credits.
This course is specifically for certification of high school teachers. Students may not receive credit for both PHYS 425 and PHYS 105 or 115.
Grading status: Letter grade.

PHYS 441. Thermal Physics. 3 Credits.
Equilibrium statistical mechanics; the laws of thermodynamics, internal energy, enthalpy, entropy, thermodynamic potentials, Maxwell's equations.
Requisites: Prerequisites, MATH 233, and PHYS 117 or 119; permission of the instructor for students lacking the prerequisites.
Grading status: Letter grade
Same as: BMME 441.

PHYS 471. Physics of Solid State Electronic Devices. 3 Credits.
Properties of crystal lattices, electrons in energy bands, behavior of majority and minority charge carriers, PN junctions related to the structure and function of semiconductor diodes, transistors, display devices.
Requisites: Prerequisite, PHYS 117 or 119; pre- or corequisite, PHYS 211 or 311.
Grading status: Letter grade.

PHYS 472. Chemistry and Physics of Electronic Materials Processing. 3 Credits.
Permission of the instructor. A survey of materials processing and characterization used in fabricating microelectronic devices. Crystal growth, thin film deposition and etching, and microlithography.
Requisites: Prerequisite, CHEM 482 or PHYS 117 or 119.
Grading status: Letter grade
Same as: APPL 472, CHEM 472.

PHYS 481L. Advanced Laboratory I. 2 Credits.
Selected experiments illustrating modern techniques such as the use of laser technology to study the interaction of electromagnetic fields and matter. Six laboratory hours a week.
Requisites: Prerequisite, PHYS 351 or 352; permission of the instructor for students lacking the prerequisites.
Grading status: Letter grade.

PHYS 491L. Materials Laboratory I. 2 Credits.
Continuation of PHYS 491L with emphasis on low- and high-temperature behavior, the physical and chemical behavior of lattice imperfections and amorphous materials, and the nature of radiation damage.
Requisites: Prerequisite, APPL 491L or PHYS 491L.
Grading status: Letter grade
Same as: APPL 492L.

PHYS 492L. Materials Laboratory II. 2 Credits.
Structure determination and measurement of the optical, electrical, and magnetic properties of solids.
Requisites: Prerequisites, APPL 470 and PHYS 351.
Grading status: Letter grade
Same as: APPL 491L.

PHYS 510. Seminar for Physics and Astronomy Teaching Assistants. 1 Credit.
How students learn and understand physics and astronomy. How to teach using current research-based methods.
Grading status: Letter grade.

PHYS 521. Applications of Quantum Mechanics. 3 Credits.
Emphasizes atomic physics but includes topics from nuclear, solid state, and particle physics, such as energy levels, the periodic system, selection rules, and fundamentals of spectroscopy.
Requisites: Prerequisite, PHYS 321.
Grading status: Letter grade.

PHYS 543. Nuclear Physics. 3 Credits.
Structure of nucleons and nuclei, nuclear models, forces and interactions, nuclear reactions.
Requisites: Prerequisite, PHYS 321; permission of the instructor for students lacking the prerequisite.
Grading status: Letter grade.

PHYS 545. Introductory Elementary Particle Physics. 3 Credits.
Relativistic kinematics, symmetries and conservation laws, elementary particles and bound states, gauge theories, quantum electrodynamics, chromodynamics, electroweak unification, standard model and beyond.
Requisites: Prerequisites, PHYS 321 and 412.
Grading status: Letter grade.
PHYS 573. Introductory Solid State Physics. 3 Credits.
Crystal symmetry, types of crystalline solids; electron and mechanical waves in crystals, electrical and magnetic properties of solids, semiconductors; low temperature phenomena; imperfections in nearly perfect crystals.
Requisites: Prerequisite, PHYS 321; permission of the instructor for students lacking the prerequisite.
Grading status: Letter grade
Same as: APPL 573.

PHYS 581. Renewable Electric Power Systems. 3 Credits.
Broad and quantitative study of renewable electric power systems: wind systems, photovoltaic cells, distributed generation (concentrating solar power, microhydro, biomass), and the economics of these technologies.
Requisites: Prerequisites, BIOL 101L, and 202 or 271; and PHYS 131, and 131L or 281L, and 201 or 401, and 211 or 311, and 351; pre- or corequisites, CHEM 261 and 481.
Grading status: Letter grade.

PHYS 582. Decarbonizing Fuels. 3 Credits.
Assess quantitatively the feasibility of powering humanity without increasing release of climate-altering carbon dioxide and other organic greenhouse gases into the atmosphere. Can these gases be removed? Which bio-chemical-physical novelties may scale to meet growing demand and at what cost?
Requisites: Prerequisites, BIOL 101L, and 202 or 271; and PHYS 131, and 131L or 281L, and 201 or 401, and 211 or 311, and 351; pre- or corequisites, CHEM 261 and 481.
Grading status: Letter grade.

PHYS 585. Imaging Science: From Cells to Stars. 3 Credits.
Fundamentals of imaging as applied to biological, medical and astronomy imaging systems. Physics of radiation and particle sources, image formation and detection physics. Principles of optics, coherence, Fourier methods, statistics, especially as they cross disciplinary boundaries for new opportunities in imaging.
Requisites: Prerequisites, MATH 233 and PHYS 118.
Grading status: Letter grade.

PHYS 594. Nonlinear Dynamics. 3 Credits.
Interdisciplinary introduction to nonlinear dynamics and chaos. Fixed points, bifurcations, strange attractors, with applications to physics, biology, chemistry, finance.
Requisites: Prerequisite, MATH 383; permission of the instructor for students lacking the prerequisite.
Grading status: Letter grade
Same as: MATH 594.

PHYS 631. Mathematical Methods of Theoretical Physics. 3 Credits.
Linear vector spaces and matrices, curvilinear coordinates, functions of complex variables, ordinary and partial differential equations, Fourier series, integral transforms, special functions, differential forms.
Grading status: Letter grade.

PHYS 632. Advanced Research Analytics. 3 Credits.
Required preparation, ability to program in a high-level computer language. Permission of the instructor for students lacking the required preparation. Methods required for the analysis, interpretation, and evaluation of physics measurements and theory. Error analysis, statistical tests, model fitting, parameter estimation, Monte Carlo methods, Bayesian inference, noise mitigation, experimental design, big data, selected numerical techniques including differential equations and Fourier techniques.
Grading status: Letter grade.

PHYS 633. Scientific Programming. 3 Credits.
Required preparation, elementary Fortran, C, or Pascal programming. Structured programming in Fortran or Pascal; use of secondary storage and program packages; numerical methods for advanced problems, error propagation and computational efficiency; symbolic mathematics by computer.
Requisites: Prerequisite, MATH 528 or 529, or PHYS 631 or 632.
Grading status: Letter grade.

PHYS 660. Fluid Dynamics. 3 Credits.
The physical properties of fluids, kinematics, governing equations, viscous incompressible flow, vorticity dynamics, boundary layers, irrotational incompressible flow.
Requisites: Prerequisite, PHYS 401; permission of the instructor for students lacking the prerequisite.
Grading status: Letter grade
Same as: MASC 560, ENVR 452, GEOL 560.

PHYS 671L. Independent Laboratory I. 3 Credits.
Six laboratory hours a week.
Requisites: Prerequisites, PHYS 401 and 412; permission of the instructor for students lacking the prerequisites.
Grading status: Letter grade.

PHYS 672L. Independent Laboratory II. 3 Credits.
Six laboratory hours a week.
Requisites: Prerequisites, PHYS 401 and 412; permission of the instructor for students lacking the prerequisites.
Grading status: Letter grade.

PHYS 691H. Senior Honor Thesis Research I. 3 Credits.
Permission of the instructor. Readings in physics and directed research for a senior honor thesis project. Required of all candidates for graduation with honors in physics.
Gen Ed: EE- Mentored Research.
Grading status: Letter grade.

PHYS 692H. Senior Honor Thesis Research II. 3 Credits.
Readings in physics and directed research for a senior honor thesis project. Required of all candidates for graduation with honors in physics.
Requisites: Prerequisite, PHYS 691H.
Gen Ed: EE- Mentored Research.
Grading status: Letter grade.

Graduate-level Courses

PHYS 701. Classical Dynamics. 3 Credits.
Requisites: Prerequisite, advanced undergraduate mechanics.
Grading status: Letter grade.

PHYS 711. Electromagnetic Theory I. 3 Credits.
Electrostatics, magnetostatics, time-varying fields, Maxwell's equations.
Requisites: Prerequisites, PHYS 631 and 632.
Grading status: Letter grade.

PHYS 712. Electromagnetic Theory. 3 Credits.
Grading status: Letter grade.
PHYS 715. Visualization in the Sciences. 3 Credits.
Computational visualization applied in the natural sciences. For both computer science and natural science students. Available techniques and their characteristics, based on human perception, using software visualization toolkits. Project course.
Grading status: Letter grade
Same as: COMP 715, MTSC 715.

PHYS 721. Quantum Mechanics. 3 Credits.
Review of nonrelativistic quantum mechanics. Spin, angular momentum, perturbation theory, scattering, identical particles, Hartree-Fock method, Dirac equation, radiation theory.
Requisites: Prerequisite, PHYS 321.
Grading status: Letter grade.

PHYS 823. Field Theory. 3 Credits.
Quantum field theory, path integrals, gauge invariance, renormalization group, Higgs mechanism, electroweak theory, quantum chromodynamics, Standard Model, unified field theories.
Requisites: Prerequisite, PHYS 722.
Grading status: Letter grade.

PHYS 824. Group Theory and its Applications. 3 Credits.
Grading status: Letter grade.

PHYS 827. Principles of Chemical Physics. 3 Credits.
The quantum mechanics of molecules and their aggregates. Atomic orbitals, Hartree-Fock methods for atoms and molecules. Special topics of interest to the instructor and research students.
Requisites: Prerequisite, CHEM 781 or PHYS 721; permission of the instructor for students lacking the prerequisite.
Grading status: Letter grade.

PHYS 829. Principles of Magnetic Resonance. 3 Credits.
Requisites: Prerequisite, CHEM 781 or PHYS 721; permission of the instructor for students lacking the prerequisite.

PHYS 831. Differential Geometry in Modern Physics. 3 Credits.
Applications to electrodynamics, general relativity, and nonabelian gauge theories of methods of differential geometry, including tensors, spinors, differential forms, connections and curvature, covariant exterior derivatives, and Lie derivatives.
Requisites: Prerequisites, PHYS 701, 711, and 712.
Grading status: Letter grade.

PHYS 832. General Theory of Relativity. 3 Credits.
Requisites: Prerequisite, PHYS 831.
Grading status: Letter grade.

PHYS 861. Nuclear Physics. 3 Credits.
Nuclear reactions, scattering, nuclear structure, nuclear astrophysics.
Requisites: Prerequisites, PHYS 543 and 721.
Grading status: Letter grade.

PHYS 862. Nuclear Physics. 3 Credits.
Requisites: Prerequisites, PHYS 543 and 721.
Grading status: Letter grade.

PHYS 871. Solid State Physics. 3 Credits.
Equivalent experience for students lacking the prerequisite. Topics considered include those of PHYS 573, but at a more advanced level, and in addition a detailed discussion of the interaction of waves (electromagnetic, elastic, and electron waves) with periodic structures, e.g., X-ray diffraction, phonons, band theory of metals and semiconductors.
Requisites: Prerequisite, PHYS 321.
Grading status: Letter grade
Same as: MTSC 871.
PHYS 872. Solid State Physics. 3 Credits.
Topics considered include those of PHYS 573, but at a more advanced level, and in addition a detailed discussion of the interaction of waves (electromagnetic, elastic, and electron waves) with periodic structures, e.g., X-ray diffraction, phonons, band theory of metals and semiconductors.
Requisites: Prerequisite, PHYS 321.
Grading status: Letter grade
Same as: MTSC 872.

PHYS 873. Theory of the Solid State. 3 Credits.
Requisites: Prerequisite, PHYS 722.
Grading status: Letter grade.

PHYS 883. Current Advances in Physics. 3 Credits.
Permission of the instructor. In recent years, elementary particle physics, amorphous solids, neutrinos, and electron microscopy have been among the topics discussed.
Grading status: Letter grade.

PHYS 885. Introductory Graduate Seminar in Physics and Astronomy. 1 Credit.
Introduction to skills needed for success in graduate courses and research, including practice using general-purpose mathematical/computational tools, assessment of the research landscape and research project design, preparing a proposal, and participating in peer review. Professional development topics such as ethics and etiquette, time management, and career planning are also covered.
Grading status: Letter grade.

PHYS 893. Seminar in Solid State Physics. 1-21 Credits.
Research topics in condensed-matter physics, with emphasis on current experimental and theoretical studies.
Grading status: Letter grade.

PHYS 895. Seminar in Nuclear Physics. 1-21 Credits.
Current research topics in low-energy nuclear physics, especially as related to the interests of the Triangle Universities Nuclear Laboratory.
Grading status: Letter grade.

PHYS 896. Seminar in Particle Physics. 1-21 Credits.
Symmetries, gauge theories, asymptotic freedom, unified theories of weak and electromagnetic interactions, and recent developments in field theory.
Grading status: Letter grade.

PHYS 897. Seminar in Theoretical Physics. 1-21 Credits.
Topics from current theoretical research including, but not restricted to, field theory, particle physics, gravitation, and relativity.
Grading status: Letter grade.

PHYS 899. Seminar in Professional Practice. 1-21 Credits.
