Visit Program Website (<http://www.physics.unc.edu>)

Christian Iliadis, Chair

The Department of Physics and Astronomy offers graduate work leading to the degrees of master of science and doctor of philosophy.

The active fields of research are biophysics, medical physics, condensed-matter physics, materials physics, nanotechnology, nuclear physics, neutrino physics and nuclear astrophysics, quantum field theory, theoretical particle physics, general relativity and gravitation, extragalactic and stellar astronomy, and astrophysics. Students can also work in the UNC–Chapel Hill biophysics program, or they can study under any advisor so long as the research project is supervised by a committee that contains a majority of UNC–Chapel Hill Department of Physics and Astronomy faculty members. The graduate courses are designed to give students a broad foundation and to introduce them to the special fields in which the research interests of the department lie.

The general regulations of The Graduate School govern the work for the degrees of master of science and doctor of philosophy. To begin a graduate program in physics or astrophysics, the student should have completed most of the requirements for the degree of bachelor of science with a major in physics at the University, or their equivalent elsewhere. The minimum prerequisite for graduate study consists of the basic undergraduate courses:

Code	Title	Hours
PHYS 118	Introductory Calculus-based Mechanics and Relativity	4
PHYS 119	Introductory Calculus-based Electromagnetism and Quanta	4
PHYS 128L	Modern Physics Laboratory	1
PHYS 311	Electromagnetism I	3
PHYS 401	Mechanics I	3
PHYS 412	Electromagnetism II	3
PHYS 421	Introduction to Quantum Mechanics	3
PHYS 441	Thermal Physics	3
PHYS 521	Applications of Quantum Mechanics	3
Together with the following courses:		
MATH 232	Calculus of Functions of One Variable II ^H	4
MATH 233	Calculus of Functions of Several Variables ^H	4
MATH 528	Mathematical Methods for the Physical Sciences I	3
Total Hours		38

^H Honors version available. An honors course fulfills the same requirements as the nonhonors version of that course. Enrollment and GPA restrictions may apply.

Research Interests

Astronomy and Astrophysics

Research includes the formation, structure, and evolution of stars, our Milky Way galaxy, evolution and dynamics of galaxies, gamma ray bursters, cosmology, numerical relativity and sources of gravitational radiation, stellar seismology and quasars, exo-planets, and interstellar medium physics. UNC–Chapel Hill has guaranteed observing time on the 4.1-meter SOAR Telescope in Chile and on the 11-meter SALT Telescope in South Africa. UNC–Chapel Hill operates a number of smaller robotic telescopes as well and maintains multiple astronomical instrumentation laboratories dedicated to adaptive optics and state-of-the-art spectroscopy.

Biological and Medical Physics

Experimental studies include manipulation and force measurement techniques with applications to DNA, molecular motors, cells, and cilia, and hydration effects in adsorption of biochemicals. There is also a strong focus on the theoretical and experimental translational research in medical imaging technologies, including radiotherapy instruments based on carbon nanotube X-ray emitters such as single-cell irradiation and in vivo micro-CT; optical coherence tomography with nanoparticle molecular imaging agents; and systems-level implementation of tomographic imaging instruments.

Condensed-Matter Physics

Experimental and theoretical studies of nanomaterials. Atomic scale studies of devices and nanoelectromechanical systems, including quantum computation and transport, actuating nanomotors and sensors, amorphous materials, semiconductors, superconductors, the optical properties of solids, charge transport in solids and fluids, epitaxial growth, magnetic materials and heterostructures.

Field Theory, Particle Physics, Cosmology, Gravitation and Relativity

Research includes gauge field theories, quantum chromodynamics, electroweak theory, grand unified theories, string theory, supersymmetry, supergravity, quantum gravity, theoretical cosmology, numerical relativity, gravitational radiation, and relativistic astrophysics.

Materials Science and Materials Physics

Experimental and theoretical research in the design, synthesis, integration, and characterization of novel solid state materials, including nanostructured materials such as quantum dots, carbon nanotubes and nanorods, quasi-crystals, and metallic glass. Applications of novel materials for solar energy, electron field emission, probes and sensors, and data storage. Applications include flat-panel displays, an X-ray system for biomedical imaging, and rechargeable batteries.

Nuclear Physics

Experimental and theoretical work includes neutrino oscillations and neutrino mass measurements, fundamental symmetries and weak interactions in supernovae. The structure and evolution of stars are investigated using nuclear probes. The origin of the elements in the universe is studied using local accelerator facilities. The nature of the nuclear force and properties of few-body systems. Polarized beams of light ions and gamma-rays and polarized ³He target. Applied nuclear physics.

Facilities and Equipment

Research in physics and astronomy is carried out in laboratories on and off the Chapel Hill campus. Within Phillips Hall and Chapman Hall there are several major research laboratories including the "nanomanipulator" (a combination of a scanning electron microscope, an atomic force microscope, and sophisticated visualization graphics); the Keck Laboratory for Atomic Imaging and Manipulation, which includes two transmission electron microscopes; and the Goodman Laboratory for Astronomical Instrumentation. Other facilities include apparatus for nuclear magnetic resonance studies, scanning probe microscopes, and Raman and optical spectrometers. For synthesis and fabrication, major facilities include molecular beam epitaxy, microwave plasma-enhanced chemical vapor deposition, laser ablation, and photolithography and reactive ion etching. Resources for highly parallel computing are provided by UNC's Information and Technology Services as well as by national centers.

The department is a partner in the Triangle Universities Nuclear Laboratory and plays a major role in experiments using the Laboratory for Experimental Nuclear Astrophysics (LENA), Tandem Accelerator, and the High-Intensity Gamma-Ray Source at the Free Electron Laser facility. UNC–Chapel Hill has an active program in low-background physics at the KURF underground facility near Blacksburg, VA. UNC–Chapel Hill has a 0.6-meter on-campus telescope and is a major partner in the 4.1-meter SOAR Telescope in Chile and the 11-meter Southern African Large Telescope (SALT) in South Africa. The department operates the PROMPT array of robotic telescopes in Chile and manages the SkyNet array of robotic telescopes. Numerous national laboratories, including Oak Ridge, Brookhaven, NIST, Los Alamos, and Argonne, as well as KamLAND, NRAO, NOAO, the Hubble Space Telescope, and the Chandra X-ray Observatory are also vital parts of our research efforts.

Fellowships and Assistantships

Teaching Assistantships (with stipends of \$17,160 for nine months) are available to qualified graduate students. Summer employment is usually available. The duties of assistants include supervising laboratory classes in elementary physics or astronomy, assisting in the supervision of advanced laboratories, teaching recitation sections, and grading papers. Graduate School fellowships are available for well-qualified applicants to the department's graduate program. Graduate students can usually be supported in the summer by teaching or research.

Research assistantships are also offered, especially to those who have completed a year or two of graduate work. The stipend is at least \$22,881 for the calendar year.

Application forms for admission, including graduate appointments, should be completed online (<http://gradschool.unc.edu/admissions>).

The M.S. degree in physics may be taken with or without a thesis. However, even if a thesis is not submitted, a student must work with a research group for at least one semester in order to learn the research techniques in a field of physics or astronomy. If the research is theoretical, the student must also gain experimental experience for at least one semester. A minor is not required for the M.S. degree, but one may be chosen in accord with the regular graduate requirements for this option. The equivalent of one semester of teaching experience is required of all M.S. degree candidates. The M.S. astrophysics track must include the following courses:

Code	Title	Hours
ASTR 701	Stellar Interiors, Evolution, and Populations	3
and a minimum of six hours from:		6
ASTR 519	Observational Astronomy	
ASTR 702	High Energy Astrophysics	
ASTR 703	Structure and Evolution of Galaxies	
ASTR 704	Cosmology	
Total Hours		9

The requirements for a Ph.D. in the Department of Physics and Astronomy are as follows:

- a. Successful completion of the following core courses in the department, or completion of their equivalents elsewhere as an undergraduate or graduate student:

Code	Title	Hours
PHYS 701	Classical Dynamics	3
PHYS 711	Electromagnetic Theory I	3
PHYS 721	Quantum Mechanics	3
PHYS 741	Statistical Mechanics	3
and two of the four courses:		6

PHYS 712	Electromagnetic Theory	
PHYS 722	Quantum Mechanics	
ASTR 701	Stellar Interiors, Evolution, and Populations	
ASTR 704	Cosmology	
or an approved substitute		
Total Hours		18

- b. Passing the Ph.D. written examination based on core graduate courses in (a) taken by that student
- c. Gaining experimental experience either through master's or doctoral research, or (if the student's research is theoretical) by performing an experimental project deemed adequate by the director of graduate studies
- d. Passing at least three other advanced graduate-level courses that have been approved by the director of graduate studies

A Ph.D. candidate is also expected to take a preliminary doctoral oral examination within the first three years of graduate study in physics at UNC–Chapel Hill. The oral examination is concerned mainly with the student's dissertation research project. A minor is not required but may be elected, in which case requirement c) above is replaced by the requirement that the student pass at least five graduate-level courses selected from no more than two departments, with no fewer than two courses in either department. The minor program must be approved in advance by the minor department. Teaching experience as part of professional training is required of all doctoral candidates. This experience can be gained through laboratory or lecture instruction as a teaching assistant, either for two semesters or until teaching competence is acquired.

Following the faculty member's name is a section number that students should use when registering for independent studies, reading, research, and thesis and dissertation courses with that particular professor.

Professors

Gerald N. Cecil (47), Experimental Astrophysics

Arthur E. Champagne (51), Experimental Nuclear Physics and Astrophysics
J. Christopher Clemens (64), Observational Astronomy, Astrophysics, Astronomical Instrumentation
Louise A. Dolan (49), Theoretical Particle Physics, Quantum Gravity
Jonathan Engel (57), Theoretical Nuclear Physics
Charles R. Evans (48), Gravity, Relativity, Theoretical Astrophysics
Christian G. Iliadis (61), Experimental Nuclear Astrophysics
Hugon J. Karwowski (37), Experimental Nuclear Physics and Astrophysics
Dmitri V. Khveshchenko (1), Theoretical Physics
Jianping Lu (56), Condensed Matter Theory, Nanotechnology, Medical Physics
Laurie E. McNeil (36), Experimental Condensed Matter and Materials Physics
Y. Jack Ng (30), Theoretical Particle Physics, Gravitation
Lu-Chang Qin (27), Materials Science, Nanotechnology
Daniel E. Reichart (13), Gamma Ray Bursts, Early Universe, Interstellar Extinction, Galaxy Clusters
Richard Superfine (55), Experimental Studies of Interfaces, Biophysics
Frank Tsui (59), Experimental Condensed Matter and Materials Physics
Sean Washburn (50), Experimental Condensed Matter and Materials Physics
John Wilkerson (12), Experimental Neutrino Physics and Fundamental Symmetries

Otto E. Zhou (62), Materials Science, Nanotechnology

Associate Professors

Fabian Heitsch (26), Computational Astrophysics
Reyco Henning (11), Neutrino Physics, Particle Astrophysics
Sheila Kannappan (14), Observational Extragalactic Astronomy
Rene Lopez (25), Experimental Condensed Matter Physics
Laura Mersini (19), Theoretical Cosmology
Amy Oldenburg, Biophotonics and Biomechanics

Assistant Professors

Rosa Tamara Branca, NMR Imaging
Joaquin Drut, Theory of Strongly Interacting Systems
Adrienne Erickcek, Theoretical Astrophysics and Cosmology
Jonathan Heckman, Theoretical Physics, String Theory, F Theory
Nicholas Law, Astrophysics

Lecturers

Alice Churukian, UNC–BEST, Physics Education Research
Duane Deardorff, Lab Director, Physics Education Research
Colin Wallace, Physics Education Research

Research Professors

Michael R. Falvo, Biophysics, Nanomechanics
Alfred Kleinhammes, Condensed Matter Physics, Materials Science

Research Associate Professor

E. Timothy O'Brien, Physics Related to Biology, Light Microscopy, Biological Sample Preparation

Research Assistant Professor

David B. Hill, Biophysics

Adjunct Professors

Sha X. Chang, Medical Physics
Richard T. Hammond, General Relativity, Gravity, Optics
David Radford, Nuclear Physics
Ryan M. Rohm, Quantum Field Theory, Theoretical Particle Physics
Jie Tang, Materials Physics, Nanomaterials

Adjunct Assistant Professor

Yueh Lee, Medical Physics

ASTR

Advanced Undergraduate and Graduate-level Courses

ASTR 501. Astrophysics I (Stellar Astrophysics). 3 Credits.

An introduction to the study of stellar structure and evolution. Topics covered include observational techniques, stellar structure and energy transport, nuclear energy sources, evolution off the main-sequence, and supernovae.

Requisites: Prerequisites, ASTR 202 or ASTR 301, MATH 383, and PHYS 331; permission of the instructor for students lacking the prerequisites.

Grading status: Letter grade.

ASTR 502. Astrophysics II (Modern Research in Astrophysics). 3 Credits.

An introduction to modern research in astrophysics based on scientific journal articles addressing a current topic of interest in galactic or extragalactic astrophysics, including training in computer modeling and statistical analysis, culminating in the completion of a research project.

Requisites: Prerequisites, ASTR 202 or ASTR 301, and MATH 383; pre- or corequisite, PHYS 331.

Gen Ed: EE- Mentored Research.

Grading status: Letter grade.

ASTR 503. Structure and Evolution of Galaxies. 3 Credits.

Overview of the structure and evolution of galaxies, with emphasis on learning and applying modern research methods such as scientific literature review and computational astrostatistics. Includes galaxy morphology and dynamics, star formation, active galactic nuclei, galaxy interactions, large-scale clustering, environment-dependent physical processes, and the evolution of the galaxy population over cosmic time.

Requisites: Prerequisites, ASTR 202 or ASTR 301, MATH 383, and PHYS 331.

Grading status: Letter grade.

ASTR 504. Cosmology. 3 Credits.

An introduction to modern cosmology: the study of the contents and evolution of the universe. Covers expanding spacetime, the thermal history of the early universe, including nucleosynthesis and the cosmic microwave background, the inflationary model for the origins of cosmic structure, and the growth of that structure through time.

Requisites: Prerequisites, ASTR 202 or ASTR 301, and PHYS 401; pre- or corequisite, PHYS 421.

Grading status: Letter grade.

ASTR 505. Physics of Interstellar Gas. 3 Credits.

Surveys the physical processes governing the interstellar medium (ISM), which takes up the "refuse" of old stars while providing fuel for young stars forming. Covers the processes regulating the galactic gas budget and the corresponding observational diagnostics. Topics: radiative transfer, line formation mechanisms, continuum radiation, gas dynamics, star formation.

Requisites: Prerequisites, ASTR 202 or ASTR 301, MATH 383, and PHYS 331.

Grading status: Letter grade.

ASTR 519. Observational Astronomy. 4 Credits.

An introduction to modern techniques in observational astronomy with an emphasis on optical and near-infrared wavelengths. Topics covered include celestial coordinates, practical python for astronomy, telescopes and CCDs, spectroscopy, astrostatistics, and mining large astronomical surveys. Three lecture and three laboratory hours a week.

Requisites: Prerequisite, ASTR 102 or 202; Pre- or corequisite, PHYS 331; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

Graduate-level Courses**ASTR 701. Stellar Interiors, Evolution, and Populations. 3 Credits.**

Stellar structure and evolution, including equations of stellar structure, stellar models, star and planet formation, fusion and nucleosynthesis, stellar evolution, stellar remnants, and the comparison of theory to observations.

Grading status: Letter grade.

ASTR 702. High Energy Astrophysics. 3 Credits.

White dwarfs and neutron stars: physical properties and observational manifestations. Extragalactic radio sources, relativistic jets, and supermassive black holes. Particle acceleration and radiative processes in hot plasmas. Accretion phenomena. X-ray and gamma-ray astrophysics.

Requisites: Prerequisites, PHYS 711 and 721.

Grading status: Letter grade.

ASTR 703. Structure and Evolution of Galaxies. 3 Credits.

Overview of the structure and evolution of galaxies, with emphasis on learning and applying modern research methods such as scientific literature review and computational astrostatistics. Includes galaxy morphology and dynamics, star formation, active galactic nuclei, galaxy interactions, large-scale clustering, environment-dependent physical processes, and the evolution of the galaxy population over cosmic time.

Grading status: Letter grade.

ASTR 704. Cosmology. 3 Credits.

General relativity and cosmological world models; thermal history of the early universe, nucleosynthesis, and the cosmic microwave background; growth of structure through cosmic time.

Requisites: Co-requisite, PHYS 701.

Grading status: Letter grade.

ASTR 705. Physics of Interstellar Gas. 3 Credits.

Surveys the physical processes governing the interstellar medium (ISM), which takes up the "refuse" of old stars while providing fuel for young stars forming. Covers the processes regulating the galactic gas budget and the corresponding observational diagnostics. Topics: radiative transfer, line formation mechanisms, continuum radiation, gas dynamics, star formation.

Requisites: Prerequisites, PHYS 711 and 721.

Grading status: Letter grade.

ASTR 719. Astronomical Data. 4 Credits.

Required preparation, physics-based cosmology course or permission of the instructor. A course designed to familiarize the student with observational techniques in optical and radio astronomy, including application of photography, spectroscopy, photometry, and radio methods. Three lecture and three laboratory hours a week.

Grading status: Letter grade.

ASTR 891. Seminar in Astrophysics. 1-21 Credits.

Recent observational and theoretical developments in stellar, galactic, and extragalactic astrophysics.

Grading status: Letter grade.

PHYS**Advanced Undergraduate and Graduate-level Courses****PHYS 401. Mechanics I. 3 Credits.**

permission of the instructor for students lacking the requisites. Particle kinematics, central forces, planetary motions. Systems of particles, conservation laws, nonlinearity. Statics, motion of rigid bodies. Lagrange's and Hamilton's equations. Euler's equations. Vibrations and waves.

Requisites: Pre- or corequisites, MATH 383 and PHYS 331;

Grading status: Letter grade.

PHYS 405. Biological Physics. 3 Credits.

How diffusion, entropy, electrostatics, and hydrophobicity generate order and force in biology. Topics include DNA manipulation, intracellular transport, cell division, molecular motors, single molecule biophysics techniques, nerve impulses, neuroscience.

Requisites: Prerequisites, PHYS 116 and 117, or PHYS 118 and 119.

Grading status: Letter grade

Same as: BIOL 431, BMME 435.

PHYS 410. Teaching and Learning Physics. 4 Credits.

Learning how to teach physics using current research-based methods. Includes extensive fieldwork in high school and college environments. Meets part of the licensure requirements for North Carolina public school teaching.

Requisites: Prerequisites, PHYS 116 and 117, or PHYS 118 and 119; permission of the instructor for students lacking the prerequisites.

Gen Ed: EE- Field Work.

Grading status: Letter grade.

PHYS 412. Electromagnetism II. 3 Credits.

Brief treatment of DC and AC circuit theory. Electrostatics: dielectrics; the magnetic field; magnetic materials. Maxwell's equations and their application to electromagnetic waves.

Requisites: Prerequisite, PHYS 311; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

PHYS 421. Introduction to Quantum Mechanics. 3 Credits.

Origins of quantum theory. Uncertainty principle. Schroedinger equation for simple systems, including hydrogen atom. Perturbation theory. Spin. Identical particles. Previously offered as PHYS 321.

Requisites: Prerequisites, MATH 383; MATH 547 or PHYS 331; pre- or corequisite, PHYS 401; permission of the instructor for students lacking the requisites.

Grading status: Letter grade.

PHYS 422. Physics of the Earth's Interior. 3 Credits.

Origin of the solar system: the nebular hypothesis. Evolution of the earth and its accretionary history. Earthquakes: plate tectonics and the interior of the earth. The earth's magnetic field. Mantle convection.

Requisites: Prerequisites, MATH 383, and either PHYS 201 and 211 or 311 and 401.

Grading status: Letter grade

Same as: GEOL 422.

PHYS 424. General Physics I. 4 Credits.

This course is specifically for certification of high school teachers. Students may not receive credit for both PHYS 424 and PHYS 104 or 114.

Grading status: Letter grade.

PHYS 425. General Physics II. 4 Credits.

This course is specifically for certification of high school teachers. Students may not receive credit for both PHYS 425 and PHYS 105 or 115.

Grading status: Letter grade.

PHYS 441. Thermal Physics. 3 Credits.

Equilibrium statistical mechanics; the laws of thermodynamics, internal energy, enthalpy, entropy, thermodynamic potentials, Maxwell's equations.

Requisites: Prerequisites, MATH 233, and PHYS 117 or 119; permission of the instructor for students lacking the prerequisites.

Grading status: Letter grade

Same as: BMME 441.

PHYS 447. Quantum Computing. 3 Credits.

Recommended preparation, some knowledge of basic linear algebra. An introduction to quantum computing. Basic math and quantum mechanics necessary to understand the operation of quantum bits. Quantum gates, circuits, and algorithms, including Shor's algorithm for factoring and Grover's search algorithm. Entanglement and error correction. Quantum encryption, annealing, and simulation. Brief discussion of technologies.

Requisites: Prerequisites, MATH 232, and PHYS 116 or 118.

Grading status: Letter grade

Same as: COMP 447.

PHYS 461. Introduction to Medical Physics. 3 Credits.

This class will introduce how physics principles and techniques have been applied to medical imaging and radiation therapy. Topics will include ionizing radiation and radiation safety, x-ray and computed tomography, ultrasound, magnetic resonance imaging, positron emission tomography, and radiation therapy. Topics such as the career path to become a medical physicist will also be discussed. The class will have lectures given by the instructor and guest lectures by experts and practitioners in this field.

Requisites: Prerequisite, PHYS 117 or 119.

Grading status: Letter grade.

PHYS 471. Physics of Solid State Electronic Devices. 3 Credits.

Properties of crystal lattices, electrons in energy bands, behavior of majority and minority charge carriers, PN junctions related to the structure and function of semiconductor diodes, transistors, display devices.

Requisites: Prerequisite, PHYS 117 or 119; pre- or corequisite, PHYS 211 or 311.

Grading status: Letter grade.

PHYS 472. Chemistry and Physics of Electronic Materials Processing. 3 Credits.

Permission of the instructor. A survey of materials processing and characterization used in fabricating microelectronic devices. Crystal growth, thin film deposition and etching, and microlithography.

Requisites: Prerequisite, CHEM 482 or PHYS 117 or 119.

Grading status: Letter grade

Same as: APPL 472, CHEM 472.

PHYS 481L. Advanced Laboratory I. 2 Credits.

Selected experiments illustrating modern techniques such as the use of laser technology to study the interaction of electromagnetic fields and matter. Six laboratory hours a week.

Requisites: Prerequisite, PHYS 351 or 352; permission of the instructor for students lacking the prerequisites.

Grading status: Letter grade.

PHYS 491L. Materials Laboratory I. 2 Credits.

Structure determination and measurement of the optical, electrical, and magnetic properties of solids.

Requisites: Prerequisites, APPL 470 and PHYS 351.

Grading status: Letter grade

Same as: APPL 491L.

PHYS 492L. Materials Laboratory II. 2 Credits.

Continuation of PHYS 491L with emphasis on low- and high-temperature behavior, the physical and chemical behavior of lattice imperfections and amorphous materials, and the nature of radiation damage.

Requisites: Prerequisite, APPL 491L or PHYS 491L.

Grading status: Letter grade

Same as: APPL 492L.

PHYS 510. Seminar for Physics and Astronomy Teaching Assistants. 1 Credit.

How students learn and understand physics and astronomy. How to teach using current research-based methods.

Grading status: Letter grade.

PHYS 515. Optics. 3 Credits.

Elements of geometrical optics; Huygens' principles, interference, diffraction, and polarization. Elements of the electromagnetic theory of light; Fresnel's equations, dispersion, absorption, and scattering. Photons. Lasers and quantum optics. Previously offered as PHYS 415.
Requisites: Prerequisites, PHYS 311 and 412; permission of the instructor for students lacking the prerequisites.

Grading status: Letter grade.

PHYS 521. Applications of Quantum Mechanics. 3 Credits.

Emphasizes atomic physics but includes topics from nuclear, solid state, and particle physics, such as energy levels, the periodic system, selection rules, and fundamentals of spectroscopy.

Requisites: Prerequisite, PHYS 421.

Grading status: Letter grade.

PHYS 543. Nuclear Physics. 3 Credits.

Structure of nucleons and nuclei, nuclear models, forces and interactions, nuclear reactions.

Requisites: Prerequisite, PHYS 421; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

PHYS 545. Introductory Elementary Particle Physics. 3 Credits.

Relativistic kinematics, symmetries and conservation laws, elementary particles and bound states, gauge theories, quantum electrodynamics, chromodynamics, electroweak unification, standard model and beyond.

Requisites: Prerequisites, PHYS 412 and 421.

Grading status: Letter grade.

PHYS 573. Introductory Solid State Physics. 3 Credits.

Crystal symmetry, types of crystalline solids; electron and mechanical waves in crystals, electrical and magnetic properties of solids, semiconductors; low temperature phenomena; imperfections in nearly perfect crystals.

Requisites: Prerequisite, PHYS 421; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade

Same as: APPL 573.

PHYS 581. Renewable Electric Power Systems. 3 Credits.

Broad and quantitative study of renewable electric power systems: wind systems, photovoltaic cells, distributed generation (concentrating solar power, microhydro, biomass), and the economics of these technologies.

Requisites: Prerequisites, BIOL 101L, and 202 or 271; and PHYS 131, and 131L or 281L, and 201 or 401, and 211 or 311, and 351; pre- or corequisites, CHEM 261 and 481.

Grading status: Letter grade.

PHYS 582. Decarbonizing Fuels. 3 Credits.

Assess quantitatively the feasibility of powering humanity without increasing release of climate-altering carbon dioxide and other organic greenhouse gases into the atmosphere. Can these gases be removed? Which bio-chemical-physical novelties may scale to meet growing demand and at what cost?

Requisites: Prerequisites, BIOL 101L, and 202 or 271; and PHYS 131, and 131L or 281L, and 201 or 401, and 211 or 311, and 351; pre- or corequisites, CHEM 261 and 481.

Grading status: Letter grade.

PHYS 585. Imaging Science: From Cells to Stars. 3 Credits.

Fundamentals of imaging as applied to biological, medical and astronomy imaging systems. Physics of radiation and particle sources, image formation and detection physics. Principles of optics, coherence, Fourier methods, statistics, especially as they cross disciplinary boundaries for new opportunities in imaging.

Requisites: Prerequisites, MATH 233 and PHYS 118.

Grading status: Letter grade.

PHYS 594. Nonlinear Dynamics. 3 Credits.

Interdisciplinary introduction to nonlinear dynamics and chaos. Fixed points, bifurcations, strange attractors, with applications to physics, biology, chemistry, finance.

Requisites: Prerequisite, MATH 383; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade

Same as: MATH 594.

PHYS 631. Mathematical Methods of Theoretical Physics. 3 Credits.

Linear vector spaces and matrices, curvilinear coordinates, functions of complex variables, ordinary and partial differential equations, Fourier series, integral transforms, special functions, differential forms.

Requisites: Prerequisites, PHYS 281L and PHYS 332.

Grading status: Letter grade.

PHYS 632. Advanced Research Analytics. 3 Credits.

Required preparation, ability to program in a high-level computer language. Permission of the instructor for students lacking the required preparation. Methods required for the analysis, interpretation, and evaluation of physics measurements and theory. Error analysis, statistical tests, model fitting, parameter estimation, Monte Carlo methods, Bayesian inference, noise mitigation, experimental design, big data, selected numerical techniques including differential equations and Fourier techniques.

Grading status: Letter grade.

PHYS 633. Scientific Programming. 3 Credits.

Required preparation, elementary Fortran, C, or Pascal programming. Structured programming in Fortran or Pascal; use of secondary storage and program packages; numerical methods for advanced problems, error propagation and computational efficiency; symbolic mathematics by computer.

Requisites: Prerequisite, MATH 528 or 529, or PHYS 631 or 632.

Grading status: Letter grade.

PHYS 660. Fluid Dynamics. 3 Credits.

The physical properties of fluids, kinematics, governing equations, viscous incompressible flow, vorticity dynamics, boundary layers, irrotational incompressible flow.

Requisites: Prerequisite, PHYS 401; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade

Same as: MASC 560, ENVR 452, GEOL 560.

PHYS 671L. Independent Laboratory I. 3 Credits.

Six laboratory hours a week.

Requisites: Prerequisites, PHYS 401 and 412; permission of the instructor for students lacking the prerequisites.

Grading status: Letter grade.

PHYS 672L. Independent Laboratory II. 3 Credits.

Six laboratory hours a week.

Requisites: Prerequisites, PHYS 401 and 412; permission of the instructor for students lacking the prerequisites.

Grading status: Letter grade.

PHYS 691H. Senior Honor Thesis Research I. 3 Credits.

Permission of the instructor. Readings in physics and directed research for a senior honor thesis project. Required of all candidates for graduation with honors in physics.

Gen Ed: EE- Mentored Research.

Grading status: Letter grade.

PHYS 692H. Senior Honor Thesis Research II. 3 Credits.

Readings in physics and directed research for a senior honor thesis project. Required of all candidates for graduation with honors in physics.

Requisites: Prerequisite, PHYS 691H.

Gen Ed: EE- Mentored Research.

Grading status: Letter grade.

Graduate-level Courses**PHYS 701. Classical Dynamics. 3 Credits.**

Variational principles, Lagrangian and Hamiltonian mechanics. Symmetries and conservation laws. Two-body problems, perturbations, and small oscillations, rigid-body motion. Relation of classical to quantum mechanics.

Requisites: Prerequisite, advanced undergraduate mechanics.

Grading status: Letter grade.

PHYS 711. Electromagnetic Theory I. 3 Credits.

Electrostatics, magnetostatics, time-varying fields, Maxwell's equations.

Requisites: Prerequisites, PHYS 631 and 632.

Grading status: Letter grade.

PHYS 712. Electromagnetic Theory. 3 Credits.

Maxwell's equations, time-varying fields, and conservation laws. Plane EM waves, polarization, propagation, dispersive media. Wave guides and resonant cavities. Radiation from slow-moving charges. Special theory of relativity. Radiation from relativistic charges. Interaction between radiation and matter.

Grading status: Letter grade.

PHYS 715. Visualization in the Sciences. 3 Credits.

Computational visualization applied in the natural sciences. For both computer science and natural science students. Available techniques and their characteristics, based on human perception, using software visualization toolkits. Project course.

Grading status: Letter grade

Same as: COMP 715, MTSC 715.

PHYS 721. Quantum Mechanics. 3 Credits.

Review of nonrelativistic quantum mechanics. Spin, angular momentum, perturbation theory, scattering, identical particles, Hartree-Fock method, Dirac equation, radiation theory.

Requisites: Prerequisite, PHYS 421.

Grading status: Letter grade.

PHYS 722. Quantum Mechanics. 3 Credits.

Review of nonrelativistic quantum mechanics. Spin, angular momentum, perturbation theory, scattering, identical particles, Hartree-Fock method, Dirac equation, radiation theory.

Requisites: Prerequisite, PHYS 421.

Grading status: Letter grade.

PHYS 741. Statistical Mechanics. 3 Credits.

Classical and quantal statistical mechanics, ensembles, partition functions, ideal Fermi and Bose gases.

Requisites: Prerequisites, PHYS 701 and 721.

Grading status: Letter grade.

PHYS 771L. Advanced Spectroscopic Techniques. 3 Credits.

Advanced spectroscopic techniques, including Rutherford backscattering-channeling, perturbed angular correlation, Raman scattering, electron paramagnetic resonance, nuclear magnetic resonance, optical absorption, and Hall effect. Two hours of lecture and three hours of laboratory a week.

Requisites: Prerequisite, PHYS 401 or 412; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

PHYS 772L. Advanced Spectroscopic Techniques. 3 Credits.

Advanced spectroscopic techniques, including Rutherford backscattering-channeling, perturbed angular correlation, Raman scattering, electron paramagnetic resonance, nuclear magnetic resonance, optical absorption and Hall effect. One hour of lecture and five hours of laboratory a week.

Requisites: Prerequisite, PHYS 401 or 412; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

PHYS 780. Advanced Materials Science. 3 Credits.

This course covers the physical fundamentals of material science with an in-depth discussion of structure formation in soft and hard materials and how structure determines material mechanical, electrical, thermal, and optical properties. Topics include amorphous and crystal structures, defects, dislocation theory, thermodynamics and phase diagrams, diffusion, interfaces and microstructures, solidification, and theory of phase transformation. Special emphasis will be on the structure-property relationships of (bio)polymers, (nano)composites, and their structure property relationships.

Grading status: Letter grade

Same as: MTSC 780, BMME 780, CHEM 780.

PHYS 821. Advanced Quantum Mechanics. 3 Credits.

Advanced angular momentum, atomic and molecular theory, many-body theory, quantum field theory.

Requisites: Prerequisite, PHYS 722.

Grading status: Letter grade.

PHYS 822. Field Theory. 3 Credits.

Quantum field theory, path integrals, gauge invariance, renormalization group, Higgs mechanism, electroweak theory, quantum chromodynamics, Standard Model, unified field theories.

Requisites: Prerequisite, PHYS 722.

Grading status: Letter grade.

PHYS 823. Field Theory. 3 Credits.

Quantum field theory, path integrals, gauge invariance, renormalization group, Higgs mechanism, electroweak theory, quantum chromodynamics, Standard Model, unified field theories.

Requisites: Prerequisite, PHYS 722.

Grading status: Letter grade.

PHYS 824. Group Theory and its Applications. 3 Credits.

Required preparation, knowledge of matrices, mechanics, and quantum mechanics. Discrete and continuous groups. Representation theory. Application to atomic, molecular, solid state, nuclear, and particle physics.

Grading status: Letter grade.

PHYS 829. Principles of Magnetic Resonance. 3 Credits.

Prerequisite, CHEM 781 or PHYS 721; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

PHYS 831. Differential Geometry in Modern Physics. 3 Credits.

Applications to electrodynamics, general relativity, and nonabelian gauge theories of methods of differential geometry, including tensors, spinors, differential forms, connections and curvature, covariant exterior derivatives, and Lie derivatives.

Requisites: Prerequisites, PHYS 701, 711, and 712.

Grading status: Letter grade.

PHYS 832. General Theory of Relativity. 3 Credits.

Differential geometry of space-time. Tensor fields and forms. Curvature, geodesics. Einstein's gravitational field equations. Tests of Einstein's theory. Applications to astrophysics and cosmology.

Requisites: Prerequisite, PHYS 831; permission of the instructor for students lacking the prerequisite.

Grading status: Letter grade.

PHYS 861. Nuclear Physics. 3 Credits.

Nuclear reactions, scattering, nuclear structure, nuclear astrophysics.

Requisites: Prerequisites, PHYS 543 and 721.

Grading status: Letter grade.

PHYS 862. Nuclear Physics. 3 Credits.

Overview of Standard Model of particle physics. Fundamental symmetries and weak interactions. Neutrino physics. Particle astrophysics and cosmology.

Requisites: Prerequisites, PHYS 543 and 721.

Grading status: Letter grade.

PHYS 871. Solid State Physics. 3 Credits.

Equivalent experience for students lacking the prerequisite. Topics considered include those of PHYS 573, but at a more advanced level, and in addition a detailed discussion of the interaction of waves (electromagnetic, elastic, and electron waves) with periodic structures, e.g., X-ray diffraction, phonons, band theory of metals and semiconductors.

Requisites: Prerequisite, PHYS 421.

Grading status: Letter grade

Same as: MTSC 871.

PHYS 872. Solid State Physics II. 3 Credits.

Topics considered include quantum and thermal fluctuations, and thermodynamics of phase transitions in a broad variety of condensed matter systems, their kinetic theory and hydrodynamics, novel materials (two-dimensional electron gas, graphene, topological insulators and superconductors, Dirac/Weyl/nodal line semimetals), condensed matter applications of modern field-theoretical methods (path integral, renormalization group, holography).

Requisites: Prerequisite, PHYS 871.

Grading status: Letter grade

Same as: MTSC 872.

PHYS 873. Theory of the Solid State. 3 Credits.

Calculation of one-electron energy band structure. Electron-hole correlation effect and excitons. Theory of spin waves. Many-body techniques in solid state problems including theory of superconductivity.

Requisites: Prerequisite, PHYS 722.

Grading status: Letter grade.

PHYS 883. Current Advances in Physics. 3 Credits.

Permission of the instructor. In recent years, elementary particle physics, amorphous solids, neutrinos, and electron microscopy have been among the topics discussed.

Grading status: Letter grade.

PHYS 885. Introductory Graduate Seminar in Physics and Astronomy. 1 Credit.

Introduction to skills needed for success in graduate courses and research, including practice using general-purpose mathematical/computational tools, assessment of the research landscape and research project design, preparing a proposal, and participating in peer review. Professional development topics such as ethics and etiquette, time management, and career planning are also covered.

Grading status: Letter grade.

PHYS 893. Seminar in Solid State Physics. 1-21 Credits.

Research topics in condensed-matter physics, with emphasis on current experimental and theoretical studies.

Grading status: Letter grade.

PHYS 895. Seminar in Nuclear Physics. 1-21 Credits.

Current research topics in low-energy nuclear physics, especially as related to the interests of the Triangle Universities Nuclear Laboratory.

Grading status: Letter grade.

PHYS 896. Seminar in Particle Physics. 1-21 Credits.

Symmetries, gauge theories, asymptotic freedom, unified theories of weak and electromagnetic interactions, and recent developments in field theory.

Grading status: Letter grade.

PHYS 897. Seminar in Theoretical Physics. 1-21 Credits.

Topics from current theoretical research including, but not restricted to, field theory, particle physics, gravitation, and relativity.

Grading status: Letter grade.

PHYS 899. Seminar in Professional Practice. 1-21 Credits.

Required preparation, Ph.D. written exam passed. The role and responsibilities of a physicist in the industrial or corporate environment and as a consultant.

Grading status: Letter grade.

PHYS 901. Research. 1-21 Credits.

10 or more laboratory or computation hours a week.

Grading status: Letter grade.

PHYS 992. Master's (Non-Thesis). 3 Credits.**PHYS 993. Master's Research and Thesis. 3 Credits.****PHYS 994. Doctoral Research and Dissertation. 3 Credits.**

Fall or spring. Staff.

Repeat rules: May be repeated for credit.

**The PHYS 821 and PHYS 896 sequence alternates with PHYS 822 and PHYS 823.*
